## PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience shipping production-grade products for clients across the US, UK, UAE, and Australia. Self-taught, started from scratch, and built my skills entirely on real work. My main stack is React, Next.js, TypeScript, and Node.js. I've worked mostly with startups where I owned significant parts of the codebase, handled both frontend and backend, and made actual architectural decisions. I write clean code, take performance seriously, and don't need hand-holding to get things done.

## SKILLS

**Frontend:** JavaScript, TypeScript, React, Next.js, Redux, HTML5, CSS3, SASS, TailwindCSS, Shadcn/UI

**Backend & Database:** Node.js, Express.js, REST APIs, MongoDB, PostgreSQL, MySQL, Firestore

**Tools & Testing:** Firebase, Git, Docker, Redis, React Native, GatsbyJS, Unit Testing, Performance Optimization, AI Tool Integration, OpenAI APIs

## WORK EXPERIENCE

### Eprecisio Technologies LLC | Senior Full Stack Engineer

Feb 2025 – Present (Full-time) | Karachi, Pakistan

- Primary project: songplace.io. Took full ownership of the codebase, refactored roughly 80% of it, added database indexing, and brought load times down 4x. The previous code had serious performance issues across the board.
- Rebuilt the playlist page from scratch as the old implementation was too slow to fix incrementally. Also built a complete artist-to-curator campaign flow: artists submit campaigns, admins assign them to curators, curators review and accept or reject, with status updates flowing back through the chain.
- Secondary project: stack8s. Refactored an existing product, rewrote the authentication flows, and integrated new backend APIs that the backend team had built.
- Also managed a team of frontend and backend developers, ran code reviews, and took an AI-driven EdTech platform from scratch all the way to production.

### Spiel Rad | Founding Frontend Engineer

Feb 2025 – Feb 2026 (Remote) | United Kingdom (spielrad.com)

- Built the entire frontend from scratch for an AI-powered medical report generation SaaS using React 19.
- Integrated OpenAI Whisper for hands-free doctor dictation and shipped 10+ pages covering Stripe payments, JWT auth, role-based access, and 20+ Shadcn/UI components, all fully accessible.

### GenieSoft | Software Developer

Jun 2023 – Jan 2025 (Remote) | United States

- Built out a full accounting SaaS covering invoices, payments, customer/vendor management, journal entries, filtering, and admin controls.
- Also worked on an AI legal document tool that generated contracts and NDAs, which required some non-trivial backend logic for prompt handling and output formatting.

### Fusion Software Development | Software Engineer

Jun 2020 – Jun 2023 (Remote) | Sydney, Australia

- Worked on AMS Pro SaaS, connecting it with Mailchimp, Nylas, Vision6, Campaign Monitor, and Google Calendar across multiple third-party integration points.
- Built several UI modules including Dashboard, Email Client, OEM Panel, and Admin Panel, along with dynamic PDF and Excel report generation.
- Improved API performance and built a CRM for blog management that could parse and index PDFs.

### Muhammad Bin Dafoon Engineering LLC | Software Developer

Oct 2019 – Apr 2020 (Remote) | Ajman, United Arab Emirates

- Built tender management modules covering Listings, Bids, Awards, and Reviews.
- Refactored a large portion of the existing codebase with performance issues, cutting load times in half.
